Arthur D Little

Founded in 1886, Arthur D. Little is the world's first management consultancy firm. Today, they are unique in Link Strategy, Innovation & Technology to master their clients' business complexity and deliver sustainable solutions. The organization works as a global service provider and employs 1.000 staff members in over 20 countries. Together with their partner, Altran Technologies, they offer over 17.000 professionals at clients' disposal.

Arthur D. Little has 29 offices in 20 countries. The first office in the Nordic region was opened in 1993 and has been advising clients on their key, cross industry and strategic issues since then. With deep industry knowledge and the high academic standards of consultants they are ensured to offer innovative and value adding solutions.

"Arthur D. Little shows clients how to innovate not just for the sake of innovating, but in order to move them closer to their strategic goals – often in dramatic leaps. Through our tools, methodologies and expertise, clients gain access to the solution of a problem, which sets them on course for leadership in their sector. We develop the necessary insights and support that allows effective implementation to create long lasting solutions." Michael Träm, Arthur D. Little – Global CEO

As many larger companies today, Arthur D. Little (ADL) is vulnerable to data leakage from both internal and external factors. In the Stockholm office, they have taken the first step in implementing a DLP-solution that will secure the workflow within the company.

In the autumn of 2008, the Stockholm office started their DLP-project with deploying Cryptzone Secured eUSB for the entire office.

With the initiative of Staffan Ljung at ADL, the whole nordic office will soon use secured communication. The intention is to implement encryption solutions for files, folders and email communications as the next step in their DLP project. This way, ADL can guarantee customers' integrity.

"We looked at other vendors before we decided to go with Cryptzone's solutions. One of the deciding factors was that we could encrypt existing USB flash drives with Cryptzone's solution. Another significant factor was the possibility to later add on more functionality as our needs become increase, and of course it was important for us to be able to receive Swedish support," says Staffan Ljung.

Why ADL decided to install a whole DLP solution instead of separate products was the range of opportunities the solution offers. With Cryptzone's Simple Encryption Platform (SEP), you can easily increase licenses, add functionality and deploy policies from one central location as the needs of security measures arises.

At the start of the DLP project, Arthur D. Little and Staffan Ljung is happy with the first deployment, and are also very satisfied with the installation support they got from Cryptzone. "Cryptzone's pricing model is also very easy to comprehend," says Staffan Ljung.

Staffan Ljung and his colleagues thought that the features in their first encryption solution were easy to use. "Three things that we are the most satisfying with the solution itself is the ease-of-use, the overview which is easy to grasp, as well as the high level of security that Cryptzone Secured eUSB delivers." Staffan Ljung adds.

Cryptzone's pricing model is also very easy to comprehend

Cryptzone solutions mitigate information security risks in the key areas of Policy Compliance, Content Security, Secure Access and Endpoint Security.
