

# NCC Construction

## Secures the Communication

Construction and Building Materials | Secure Communications & Data Protection  
| Simple Encryption Platform

*“Our main objective was to be able to provide data security solutions for the different target audiences within the organization”*

*“Employees need to communicate information with contractors, suppliers and with each other to ensure projects are safe, smooth and well-planned.”*

Cryptzone solutions mitigate information security risks in key areas of Policy Compliance, Content Security, Secure Access and Endpoint Security.

Large workplaces must take effective security measures. The priority is to guarantee the safety of the employees and ensure they can perform their assignments under safe circumstances. But it is also important to secure the organization's data and resources, to protect the company whilst also supporting a smooth workflow and secure working environment.

NCC Construction Sverige is one of the largest construction companies in Sweden with an annual turnover of nearly 25 billion SEK. The company has around 8500 employees and is active in building and plant construction, construction services, and larger infrastructure projects across the country. NCC, in other words, is a large employer with a considerable need for security measures, not only to protect construction sites and the people working there, but also to ensure the security of the company's information. Employees need to communicate information with contractors, suppliers and with each other to ensure projects are safe, smooth and well-planned. Without appropriate security measures, the company would be at risk of confidential or sensitive information getting into the wrong hands.

NCC Construction Sverige has 56 offices around Sweden and when Cryptzone's Swedish reseller Fonator contacted the company, Rustan Andersson, IT-coordinator at NCC, was aware of the risk of data loss that the company was facing and was looking for the right solutions to put in place. In the spring of 2009, funds to reinforce IT-security were incorporated in the budget.

*“Our main objective was to be able to provide data security solutions for the different target audiences within the organization, and to give them the tools they needed to handle sensitive information, both internally and externally, in the correct way”, says Andersson.*

*“To start with, we observed a priority need to encrypt our emails, files & folders and USB flash drives.”*

NCC Construction Sverige installed Cryptzone's Simple Encryption Platform and very quickly after the start of the project the first 250 licenses were installed. Later in the year, NCC was ready to take the next steps towards increase their data leak protection. After comparing a number of possible suppliers, Cryptzone was the obvious choice.

*“The choice fell naturally on Cryptzone. We were convinced that their products were right for our organization due to the fact that their solutions*

*had great features, and they were very easy for the end user to handle”, says Andersson.*

Other points that Andersson mentions include the price/performance of Cryptzone's security solutions, and the modular architecture and central management of the solutions that provide a platform for further increasing the company's information security.

NCC has now put in place guidelines on how information should be handled and, with the help of the Cryptzone Simple Encryption Platform, they have taken action to provide the best possible security for their communications. With one less thing to worry about, Andersson and his colleagues can now concentrate on building their magnificent construction work and improve the Swedish landscape.
