

Cryptzone offers new zero download Reader

The Data Leak Prevention Company launches new Reader for their award winning email encryption solution.

Gothenburg, Sweden, October 5th 2007 - Cryptzone, the Data Leak Prevention company, today launched the long awaited cross platform Reader Lite, which is available for free at www.cryptzone.com. The Secured eMail Reader Lite enables any email recipient, cross platform, reading capabilities with no download necessary. The entire process is completed without requiring any user interaction except for the initial single click. The availability of the Reader Lite provides 100% coverage for end users whom can now receive encrypted email inside as well as outside of the enterprise disregarding where they are located, as well as providing confidence to senders that their emails can be read on any system; it does not require Administrative rights to install and does an automatic secure wipe of sensitive information after use.

"The launch of Reader Lite is a very important step in extending SEP, Simple Encryption Platform." Says Rami Avidan Co-Founder and COO at Cryptzone. "The Reader Lite enables any user in any environment to be able to access and reader their encrypted emails without any lengthy signup or install procedures."

This addition will further extend SEP - Simple Encryption Platform, a platform that offers the leading Data Leak Prevention solution through operability, scalability and simple management of data encryption assets. This common encryption platform strategy allows additional Cryptzone products to leverage SEP, allowing deployment to be more cost-effective, thereby reducing operational costs and freeing up IT resources. An organization's encryption requirements will typically develop in a phased approach, adding new encryption applications such as email, file, folder, mobile USB devices and complete disk drives over a period of time. The SEP platform allows the organization to add new encryption applications when and where they are ready to do so, without requiring the installation of a new central server together with new management platforms.

About Cryptzone:

Cryptzone is a recognized leader in data leak prevention solutions that secure data at rest and in transit. Its mission is to provide security technology that people actually can and will use, thereby increasing the overall data protection and minimizing data leaks. Cryptzone helps users secure email, files, folders, disks, USB sticks and mobile terminals without forcing users to change the way they work, while giving IT departments' complete control of user rights. The company has offices in Gothenburg, Sweden, New York, US, and Mannheim, Germany. For more information about Cryptzone and the company's portfolio of encryption solutions, visit www.cryptzone.com
