

AppGate Security Advisory

ID: 2017-05-0001

First published 2017-05-18
Last updated 2017-05-18

Title

Information Disclosure via Management Interface.

Summary

A vulnerability exists in the Management Interface (default port 444), that could allow unauthorized access to the local files on the Controllers.

Severity

High

Products Affected

AppGate (previously known as AppGate XDP) appliances with Controller role, version 3.1.1 and earlier.

AppGate Classic servers are not affected.

Suggested Action

Upgrade AppGate controllers to version 3.1.2 or later.

Workaround and Mitigations

Restrict Management Interface IP Access to trusted Gateways and Clients. Require that the AppGate Client be used for Management User Interface access, through the creation of appropriate AppGate entitlements.
